

ApiGuard Use

A comparison of average winter colony mortality among beekeepers who reported treating or not treating with ApiGuard, at least once, between April 2010 and March 2011.

Winter

Report ID: 276

Some Significant Differences

Respondent Ratio

Interpretation

Beekeepers who reported treating with ApiGuard reported 10 fewer overwintering colony deaths per 100 managed colonies than those who did not report using a known varroa mite control product. In other words, beekeepers who reported treating with ApiGuard lost 27% fewer colonies than those who did not report treating with any known varroa mite control product.

Survey Question

For the products listed below, indicate in which months you applied the product to a majority of your colonies.
ApiGuard

		Total Number of Respondents Providing Valid Responses	Total Number of Colonies Managed	Average Number of Colonies Managed		Average Colony Loss		
				Mean	Standard Error	Mean(%)	Lower 95% CI	Upper 95% CI
ApiGuard	This Product Used	415	54,244	130.7	39.8	26.7	23.8	29.7
	Other Product Used	2,334	123,895	53.1	11.8	35.1	33.6	36.6
	Nothing Used	1,675	25,192	15.0	4.7	36.7	34.9	38.5

Comments About This Data

We do not know if the responding beekeepers applied this product according to label directions. Nor do we know how often they applied this product. These factors may affect the results reported here. More detailed questions regarding doses and application methods are planned for future surveys.
