

Quantifying Brood Pattern

Brood pattern can be judged on a **scale from 1 to 5**, “1” being the poorest/most spotty, and “5” being the most solid or with the fewest open cells. Often a rating of 1 indicates a brood disease or queen issue. Rating of the brood pattern is only relevant during the brood production season. If no brood is present at all, just write “NA” (not applicable).

More solid

More spotty
