

# Sentinel App Quick Start Guide 2022

First, Register for an account at [Research.Beeinformed.org](https://research.beeinformed.org) and follow the App and Dashboard Protocol <https://beeinformed.org/citizen-science/sentinel-apiaries/> to download and install the app. The general workflow of the application is to use the mobile app to enter data. Then sync that data to the server and go online to view that data.

 <p>The screenshot shows the Sentinel app interface on a mobile device. At the top, the status bar shows "Verizon" and "10:49 AM". The app header is orange with "BIP Research" and a gear icon. Below the header, it displays "User: MikaylaElectra Database: Sentinel (Sentinel)". The main content area is titled "Recent Sample Events" and shows "No recent sample events...". There is a large orange button labeled "Take Samples". Below this is a section titled "New Records" with a list of categories: "Beekeepers", "Locations", "Sample Events", and "Management Actions", each with a circular counter showing "0" and a right-pointing arrow. At the bottom, there is a large orange button labeled "SYNC WITH BIP" and a section titled "Saved Records".</p>	<p>Once setup, your app should look something like this screen, which has features...</p> <p>Gear icon, upper right: This links to login/out, and app configuration.</p> <p>A list of recent sample events will populate as you enter data. New records will also be counted in the ovals under New Records. These have not been synced to the server. Once you click the Sync With BIP button, the data will be saved on the server and viewable there. The counts will then go back to zero and appear as this screen. To get started ...</p> <p><b>Enter Beekeeper/s (Apiary owners):</b> Under the text "New Records" you can select Beekeepers to enter a new one. Enter your information if you are only collecting data from your bees, or enter more people if also collecting data from other beekeepers.</p> <p>Next, you should <b>enter locations</b>. Once you have entered <b>beekeepers</b> and <b>locations</b>, you can reuse them in the future. You will not need to re-enter them.</p>
---	--

**Enter Location/s:** Click the Locations line, to create new locations.

Pick From Map is best. This will populate GPS points. You can provide additional detail such as street address. Adding the State and County is helpful for us to populate your data to the regional map online.

Note: Your specific location will not be publicly shared to protect your privacy.

When done, be sure to click the floppy disk icon in the upper right hand corner to Save your work. Then click the back arrow in the upper left corner to return to the home screen.

Back at the home screen, we see we have one new beekeeper and location under New Records. Now, we can either Take Samples, or record our recent management history.

Let's enter the recent Management that has been done to the colonies. Select the Management Actions row in the list below New Records.

When selecting, "Management Actions", the next screen looks like this. From here, click the Plus sign upper right to create a new one.

Verizon 1:01 PM

Select a Colony

Action Type  
Select...

Notes

Select the previously entered beekeeper and location where it says.

You can back date the management to capture past events. If you are estimating the dates, record that.

If the management applies to all the colonies at the location, you can leave the Colonies entry blank, but it is best to specify the colony numbers, especially if not all colonies are treated the same. Tap "Select a Colony".

Verizon 1:07 PM

Select a Colony

S22-SMEW-4

S22-SMEW-4 ADD

"4"

1 2 3 4 5 6 7 8 9 0

- / : ; ( ) \$ & @ "

#+= . , ? ! ' <

ABC space search

From this screen, you can type colony numbers in beside the magnifier, then click "Add".

Once colonies are added, select them to apply the management to them. In this screen four colonies are selected, while colonies "2" and "3" are not selected.

Once entered, your colony numbers are available for reuse in other screens. Please carefully type each one, and you won't have to do that again.

Now, I have a May 2<sup>nd</sup> Management on four colonies. I can add more detail such as Feed Type, then click the save button.

Under Action Type, there are additional choices such as Treatment, Requeen, and Change Equipment. The details provided for each choice vary.

After saving, click the back arrow to return to home screen

Back at the home screen, we can enter more recent Management Actions, or we can go to the apiary and “Take Samples” by clicking the button.

Note: Some participants prefer to record data on paper when in the Apiary, and later use the app to enter their paper notes. If you do this, you will want to review the forms and prepare your datasheet first to be sure to capture all the data.

1. Select “Take Samples”
2. On the next screen, select the Beekeeper or apiary owner of where you are sampling. You can create a new one from this screen too.
3. A new screen will open, there select the Location you are at. You can create a new one from this screen too.

This is the Sample Event screen. Enter some details and select “+ Sample”.

**Notes:**

Sampler is the person making the observations while Beekeeper is the owner or manager of bees. Event notes are about this date and location, while after you select “+ Sample” you can make notes about each colony.

On the Sample screen, it has 3 tabs for details about the colony.

Once you save and return to the Sample Event screen, the samples are listed. You can enter more from the “+ Sample” button. Other fields on the Sample Event screen are seen here. When all samples are in, click save button, then back arrow.

Back at home screen, we see one sample event. If done, AND you have a GOOD network connection, ready to “SYNC WITH BIP”.

The app will let you know its Syncing and if successful.

If successful, the records are moved to the Saved Records section and viewable there. These records are no longer editable on the app. If a correction is needed, please contact us, until data editing is available on the website.

Once your data is Synced, you can go to [Research.beeinformed.org](https://research.beeinformed.org) to view reports or download data. After logging in, click on the User Dashboard link in the topbar menu

From there, you can Export your data, or view the Sentinel Report. If you have data from multiple beekeepers or from multiple years, make those selections before clicking the Sentinel Report button
